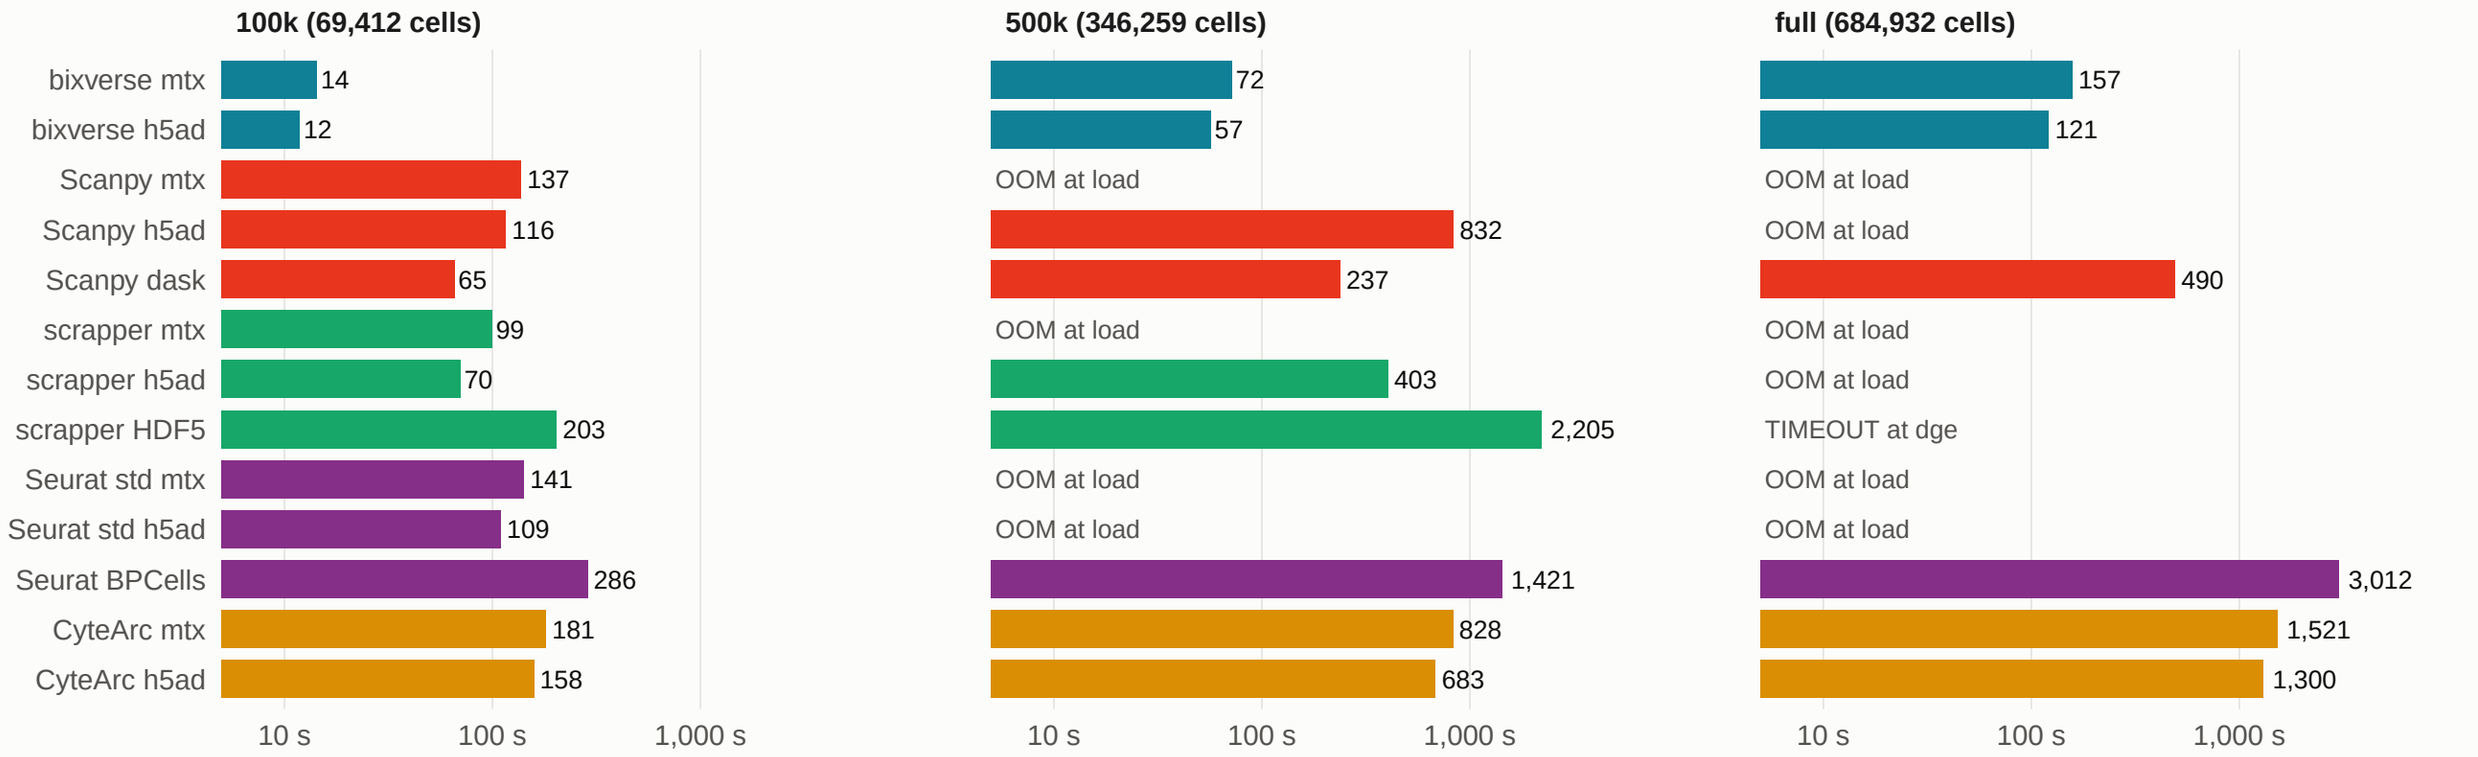
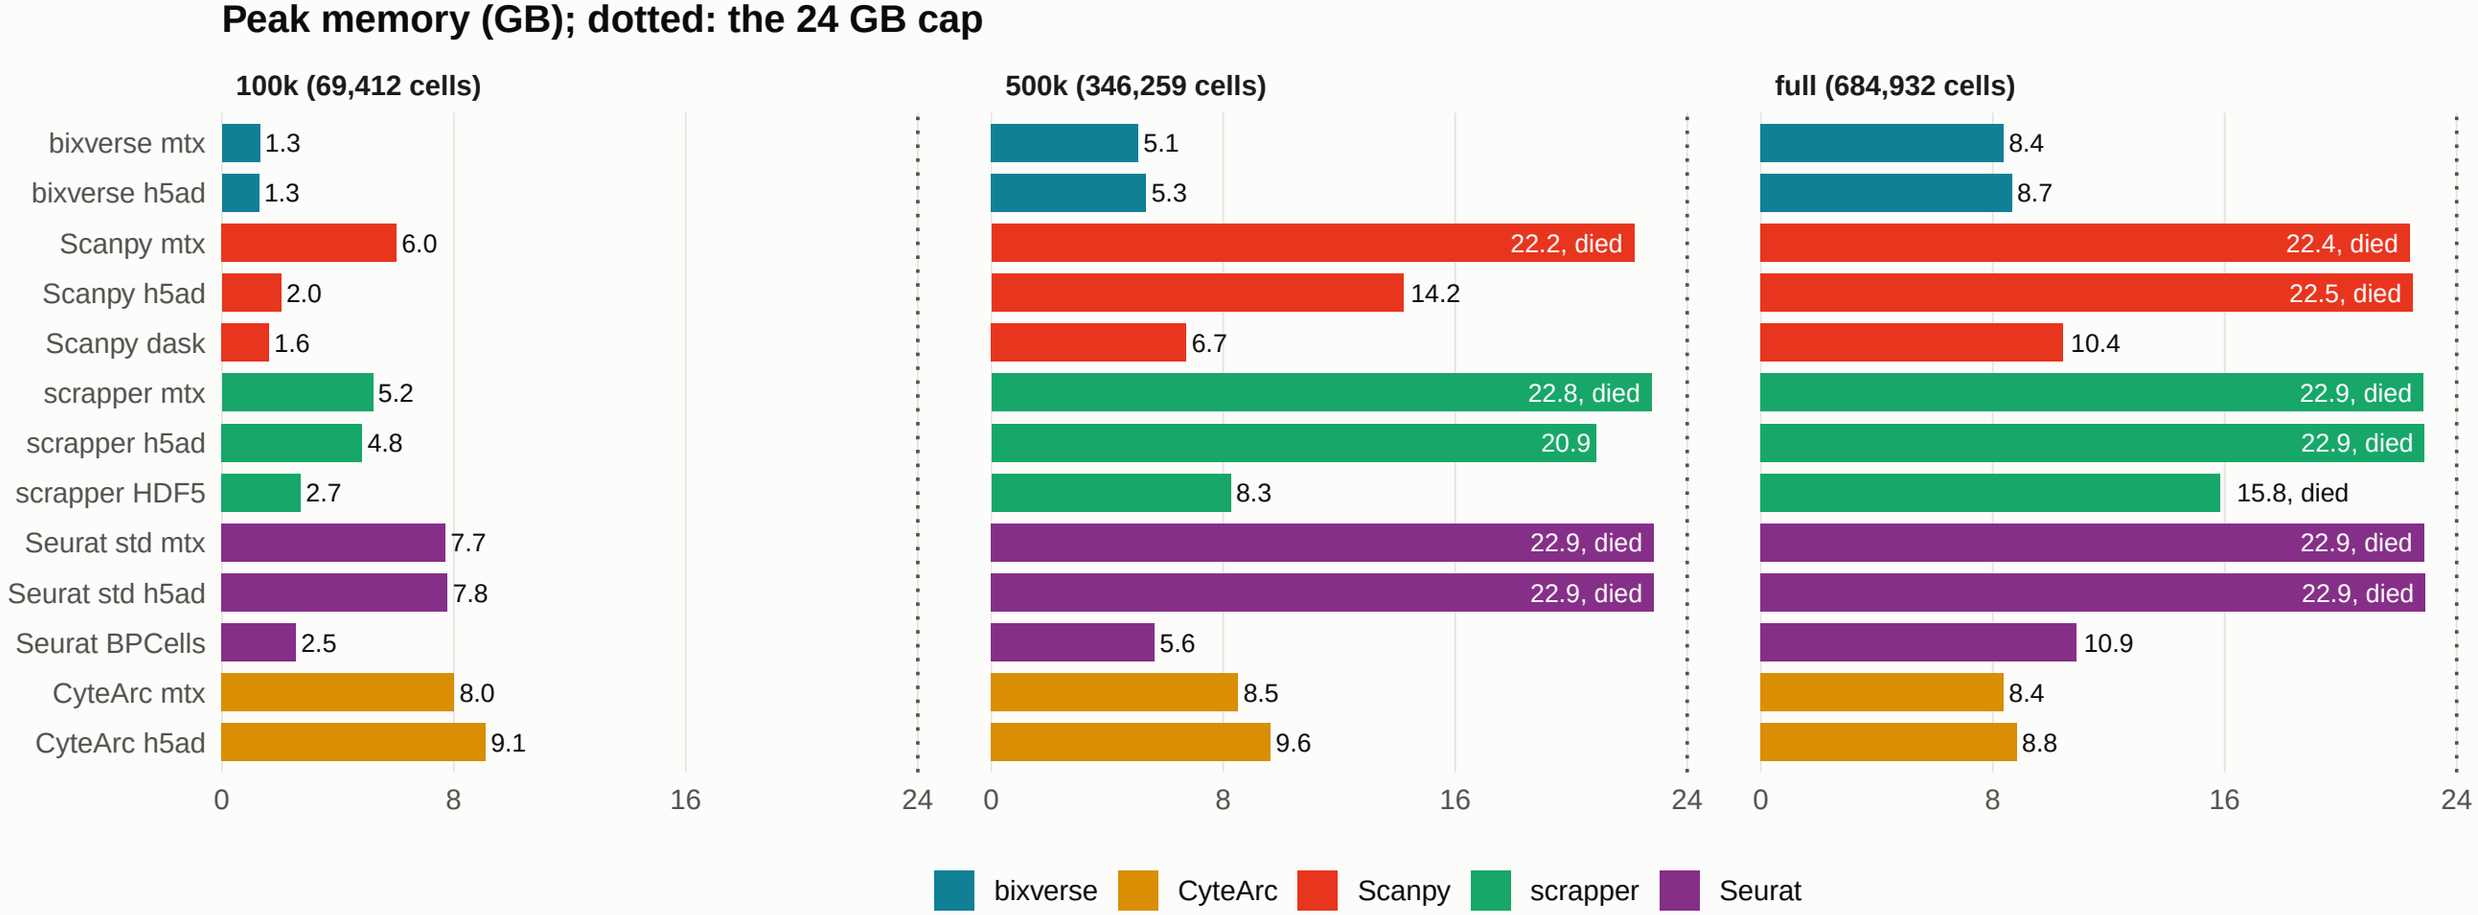
Parse 1M PBMC: time and memory

Under a 24 GB, 8 core cap. One repeat per run; a run that died shows where.

Without tSNE



Peak memory (GB); dotted: the 24 GB cap



Docker runs only; the native bixverse runs (CPU, wgpu, MLX) are in their own table in docs/results.md.
Scanpy dask has no DGE step. A run that timed out in tSNE keeps its time without tSNE.
