Wall time per step: Parse 1M PBMC

Seconds per step. Colour is scaled per step and size: fastest framework 0, slowest 1, on square−root seconds.

per step: fastest … slowest

Black: n/a (step not in that framework), OOM or TIMEOUT where the run died, − not reached.
Each step is scaled over the runs that finished it: at 1M the bixverse CPU tSNE is red because the others timed out.
Scanpy dask has no DGE step. bixverse GPU and MLX run natively without a memory cap.
bixverse CPU tSNE builds its kNN with IVF from 500k (kmknn at 100k). (qd) steps are not in the total.
